Pilots in Command Kristofer Pierson 2014 "Captains Class" is an extra module in the pilot upgrade training that air carriers use to train new captains. It is typically thought of by captain candidates as the capstone of training, enabling pilots to operate each flight and each trip as a good leader. Yet not every Captains Class provides tricks of the trade, pointers on leadership, or sage advice on how to put everything together. Every pilot knows, though, that when everything seems to be going wrong, everyone looks to the Captain --- the Pilot-In-Command --- to make things

right. *Pilots In Command: Your Best Trip, Every Trip* fills a void in the aviation industry today, especially with the increased demand for a new cadre of airline pilots to fill the shoes of retirees, real advice from real pilots about how to be true leaders is both a rarity and a necessity. This book, in an easy-to-use format, will go beyond what is required by flight training curricula and provide practical, sage advice to student and professional aviators alike on a range of topics, all tying to the application of basic leadership skills. *Pilots In Command* is packed with information, techniques, and advice. The

author covers crew roles, crew briefings, flight attendants, crew resource management (CRM), threat and error management (TEM), ground services, dispatch, customer service, abnormal and emergency situations, layovers, crew dynamics, career development, and professional standards. Pilots In Command will provide you with the information schools aren't required to teach in ground school--information that you would only get from experience and deep, thoughtful chats with your fellow pilots at 30,000 feet"--Provided by publisher.

Air Carrier Operations Mark J. Holt 2020 Whether a Part 121 airline or a Part 135 charter operator, a company lives or dies by its compliance with the applicable Federal Aviation Regulations, or FARs (14 CFR). Air Carrier Operations introduces students of aviation to the significant Federal Aviation Regulations affecting airline operations. Students and professionals gain an appreciation of the variety of regulatory issues involved in air carrier operations and gather the background information they need to identify and apply the relevant regulations. This book examines the many regulations governing an air carrier and

focuses primarily on Part 121 air carriers; in addition, coverage includes Part 119 and relevant portions of Parts 135, 91, 61 and 25 of the Federal Aviation Regulations. The text emphasizes Instrument Flight Rules (IFR) flight operations, particularly useful to instrument-rated pilots and aircraft dispatchers. For this third edition, the authors collaborated with two seasoned FAA Licensed Flight Dispatchers, enhancing the content relevant to students preparing for the FAA Flight Dispatcher Certificate. In addition, updates and revisions throughout reflect new FAA regulatory changes to provide students, pilots, flight

crews, dispatchers, and management professionals with the essential information pertinent to today's air carrier operations. Air Carrier Operations is a college-level text ideal for Air Carrier Flight Operations and Airline Operations courses, is used extensively in Airline Dispatcher Training courses, and is an excellent preparation for airline interviews and initial airline pilot training.
