Birds of the Yukon Territory Pamela H. Sinclair 2011-11-01 The Yukon is a land of remarkable wilderness, diverse ecosystems, and profound beauty. It is also home to a unique assemblage of birds. As of 2002, 288 bird species have been documented in the Yukon, with 223 occurring regularly. They occupy an amazing range of habitats, from the most barren mountain peaks to lush valley bottom forests, and are an integral part of the cultural heritage of Yukon First Nations people. The vast areas of natural habitat with limited road access can make the study of birds challenging, but are key in defining the nature of birding in the Yukon. Birds of the Yukon Territory is the result of a decade-long project initiated to gather and share what is known about the Yukon's birdlife. Lavishly illustrated with 600 colour photographs and 223 hand-drawn bird illustrations, the book presents a wealth of information on bird distribution, migration and breeding chronology, nesting behaviour, and habitat use, and on conservation concerns. Two hundred and eighty-eight species of birds are documented, including 223 regular species, and 65 casual and accidental species. In compiling this meticulously researched volume, the authors

consulted over 166,000 records in a database created by the Canadian Wildlife Service, with information dating back to 1861. Sections on birds in Aboriginal culture and history, and bird names in the Yukon First Nations and Inuvialuit languages, enhance the book, as do the numerous easily interpreted charts and graphs. Destined to become a basic reference work on the avifauna of the North, *Birds of the Yukon Territory* is a must-have for bird enthusiasts and anyone interested in the natural history of the Yukon and the North.

The Curious Book of Birds (Masterpiece Collection) Large Print Abbie Farwell Brown 2014-01 The Lord looked about Him at the flocks of newly made birds, who were preening their wings and wondering at their own bright feathers, and said to Himself, - "I will make these pretty creatures useful, from the very beginning, so that in after time men shall love them dearly. Come, my birds," He cried, "come hither to me, and with the beaks which I have given you hollow me out here, and here, and here, basins for the lakes and pools which I intend to fill with water for men and for you, their friends. Come, little brothers, busy yourselves as you would wish to be happy hereafter." Then there was a twittering and fluttering as the good birds set to work with a will, singing happily over the work which their dear Lord had given them to do. They pecked and they pecked with their sharp little bills; they scratched and they scratched with their sharp little claws, till in the proper places they had hollowed out great basins and valleys and long river beds, and little holes in the ground. Then the Lord sent great rains upon the earth until the hollows which the birds had made were filled with water, and so became rivers and lakes, little brooks and fountains, just as we see them to-day. Now it was a beautiful, beautiful world, and the good birds sang happily and rejoiced in the work which they had helped, and in the sparkling water which was sweet to their taste. All were happy except one. The Woodpecker had taken no part with the other busy birds. She was a lazy, disobedient creature, and when she heard the Lord's commands she had only said, "Tut tut!" and sat still on the branch where she had perched, preening her pretty feathers and admiring her silver stockings. "You can toil if you want to," she said to the other birds who wondered at her, "but I shall do no such dirty work. My clothes are too fine." Now when the world was quite finished and the beautiful water sparkled and glistened here and there, cool and refreshing, the Lord called the birds to Him and thanked them for their help, praising them for their industry and zeal. But to the Woodpecker He said, - "As for you, O Woodpecker, I observe that your feathers are unruffled by work and that there is no spot of soil upon your beak and claws. How did you manage to keep so neat?" The Woodpecker looked sulky and stood upon one leg.

The Curious Book of Birds Abbie Farwell Brown 2021-01-20 ONG, long ago, at the beginning of things, they say that the Lord made the world smooth and round like an apple. There were no hills nor mountains: nor were there any hollows or valleys to hold the seas and rivers, fountains and pools, which the world of men would need. It must, indeed, have been a stupid and ugly earth in those days, with no chance for swimming or sailing, rowing or fishing. But as yet there was no one to think anything about it, no one who would long to swim, sail, row, and fish. For this was long before men were created. The Lord looked about Him at the flocks of newly made birds, who were preening their wings and wondering at their own bright feathers, and said to Himself, "I will make these pretty creatures useful, from the very beginning, so that in after time men shall love them dearly. Come, my birds," He cried, "come hither to me, and with the beaks which I have given you hollow me out here, and here, and here, basins for the lakes and pools which I intend to fill with water for men and for you, their friends. Avian Biology Donald S. Farner 2013-09-17 Avian Biology, Volume II is a collection of papers that deals with the biology of birds such as their integumentary and respiratory systems. One paper describes the integument of birds that includes the skin, feathers, pterylosis, skin muscles, and other integumentary derivatives such as beaks, comb, claws, and spurs. The book explains the process of molting and the different generations of feathers; such molting is dependent on the wear and tear of the plumage, as well as hormonal changes. One author compares the blood vascular system of birds and mammals, and then gives a detailed description of avian hematology. Other papers deal with the respiratory functions, digestive system, and the nutritional needs of birds. Of interest is one author's description of the production of nutritive fluids, holocrine, which is secreted for the young. This secreted fluid contains about 23 percent protein, 10 percent fat, and no sugar. Unlike mammalian milk, it also contains cells. Another paper examines the intermediary metabolism of birds and the climatic effects on metabolism. This book is suitable for bird enthusiasts, zoologists, and avian biologists.

There will be more besides - perhaps shells and stones for last touches - but what will finally make your bird tremble with dreams of open sky and soaring flight? This picture book shows how even the smallest of things, combined with wonder and a steady heart, can transform into works of magic.
