You Don't Know JS: this & Object Prototypes Kyle Simpson 2014-07-11 No matter how much experience you have with JavaScript, odds are you don't fully understand the language. This concise, in-depth guide takes you inside JavaScript's this structure and object prototypes. You'll learn how they work and why they're integral to behavior delegation—a design pattern in which objects are linked, rather than cloned. Armed with this knowledge, you can become a true JavaScript master. With this book you will: Explore how the this binding points to objects based on how the function is called Look into the nature of JS objects and why you'd need to point to them Learn how developers use the mixin pattern to fake classes in JS Examine how JS's prototype mechanism forms links between objects Learn how to move from class/inheritance design to behavior delegation Understand how the OLOO (objects-linked-to-other-objects) coding style naturally implements behavior delegation

Outrage, Inc. Derek Hunter 2018-06-19 From Derek Hunter—one of the most entertaining political writers today—comes an insightful, alarming look at how progressives have taken over academia, pop culture, and journalism in order to declare everything liberal great, and everything great, liberal. Progressives love to attack conservatives as anti-science, allowing in fake news, and culturally backwards. But who are the real denialists here? There are three institutions in American life run by gatekeepers who have stopped letting in anyone who questions their liberal script: academia, journalism, and pop culture. They use their cult-like groupthink consensus as "proof" that science, reporting, and entertainment will always back up the Democrats. They give their most political members awards, and then say the awards make their liberal beliefs true. Worse, they are using that consensus to pull the country even further to the left, by bullying and silencing dissent from even those they've allowed in. Just a few years ago, the media pretended they were honest brokers. Now a CNN segment is seven liberals versus a sacrificial lamb. MSNBC ate their sacrificial lamb. Well, Chris Matthews did. Tired of being forced to believe or else, Derek Hunter exposes the manufactured truths and unwritten commandments of the Establishment. With research and a biting, sarcastic wit, he explains: The growing role of celebrities in the political world, and movies with a "message" that dominate awards season, but rarely the box office. The unquestioning reporting on "studies" that don't prove what they say they prove. The hidden bias of "fact-checking," when the media cherry picks which facts they check. Celebrity scientists like Bill Nye and Neil deGrasse

Tyson blending liberal activism with pretend expertise outside their fields. Clever, controversial, and convincing, Derek Hunter's book gets to the root of America's biggest cultural war lies.

The Zona Nathan L. Yocum 2012-02 It started with the Storms.The world got too hot too fast. The weather wrecked Hell on man's shiny, pretty civilization. With the heat and wet came bugs, with bugs came new diseases, and man's numbers and sanity dwindled.The survivors reformed governments like petty shadows of the world's old empires. They sought answers and justifications, they sought redemption for what they perceived as man's holy smiting.Welcome to the Arizona Reformed Theocracy, otherwise called The Zona.Here the Church rules with power absolute. The laws are simple, all sin is punished swiftly. Preachers enforce the Church's words like old West lawmen.But what happens when a Preacher refuses to kill? What happens when men of honor take a stand against their rulers?

ITER: The Giant Fusion Reactor Michel Claessens 2019-10-17 This book provides for the first time an insider's view into ITER, the biggest fusion reactor in the world, which is currently being constructed in southern France. Aimed at bringing the "energy of the stars" to earth, ITER is funded by the major economic powers (China, the EU, India, Japan, Korea, Russia and the US). Often presented as a "nuclear but green" energy source, fusion could play an important role in the future electricity supply. But as delays accumulate and budgets continue to grow, ITER is currently a star partially obscured by clouds. Will ITER save humanity by providing a clean, safe and limitless source of energy, or is it merely a political showcase of cutting-edge technology? Is ITER merely an ambitious research project and partly a PR initiative driven by some politically connected scientists? In any case, ITER has already helped spur on rival projects in the US, Canada and the UK. This book offers readers a behind-the-scenes look at this controversial project, which France snatched from Japan, and introduces them to a world of superlatives: with the largest magnets in the world, the biggest cryogenic plant and tremendous computing power, ITER is one of the most fascinating, and most international, scientific and technological endeavours of our time.

Upon the Gardens of Epicurus William Temple 2004 Sir William Temple, diplomat, statesman, and writer, retired to his garden in the 1680s and wrote what has become one of the key texts, not only of gardening, but also of the English aesthetic. It was he who introduced the idea of the charm of irregularity, and who gave it the allegedly Chinese name sharawadgi. The English style of landscape gardening can be traced in a direct line to this essay, which has not been in print for over 95 years.

The Spirit of Mediterranean Places Michel Butor 1997 This book gathers French writer Michel Butor's essays on his travels in the Mediterranean. Included are pieces on Cordova, Istanbul, Salonica, Delphi, Mallia in Crete, and Ferrara and Mantua in northern Italy. There is an extended essay on Egypt, where, when Butor was twenty-four, he spent a year teaching French in a secondary school in a provincial city. Far from the bland comments on the landscapes by an enchanted walker, inspired by memories, Butor digresses on the history and the literature of the places that he visits. He raises what he calls "geographical criticism" to the rank of art, never forgetting that cities are not miracles of nature but the masterpieces of men. Emperors built palaces where conquerors had previously destroyed them. Sculptors erected statues and writers wrote books. Michel Butor registers these as a part of the memory of place. Butor went on to become one of the leading exponents of the avant-garde writing that emerged in France in the 1950s.

Javatrekker Dean Cycon 2007-10-17 In each cup of coffee we drink the major issues of the twenty-first century-globalization, immigration, women's rights, pollution, indigenous rights, and self-determination-are played out in villages and remote areas around the world. In Javatrekker: Dispatches from the World of Fair Trade Coffee, a unique hybrid of Fair Trade business, adventure travel, and cultural anthropology, author Dean Cycon brings readers face-to-face with the real people who make our morning coffee ritual possible. Second only to oil in terms of its value, the coffee trade is complex with several levels of middlemen removing the 28 million growers in fifty distant countries far from you and your morning cup. And, according to Cycon, 99 percent of the people involved in the coffee economy have never been to a coffee village. They let advertising and images from the major coffee companies create their worldview. Cycon changes that in this compelling book, taking the reader on a tour of ten countries in nine chapters through his passionate eye and unique perspective. Cycon, who is himself an amalgam-equal parts entrepreneur, activist, and mischievous explorer-has traveled extensively throughout the world's tropical coffeelands, and shows readers places and people that few if any outsiders have ever seen. Along the way, readers come to realize the promise and hope offered by

sustainable business principles and the products derived from cooperation, fair pricing, and profit sharing. Cycon introduces us to the Mamos of Colombia-holy men who believe they are literally holding the world together-despite the severe effects of climate change caused by us, their "younger brothers." He takes us on a trip through an ancient forest in Ethiopia where many believe that coffee was first discovered 1,500 years ago by the goatherd Kaldi and his animals. And readers learn of Mexico's infamous Death Train, which transported countless immigrants from Central America northward to the U.S. border, but took a horrifying toll in lost lives and limbs. Rich with stories of people, landscapes, and customs, Javatrekker offers a deep appreciation and understanding of the global trade and culture of coffee. In each cup of coffee we drink the major issues of the twenty-first century-globalization, immigration, women's rights, pollution, indigenous rights, and self-determination-are played out in villages and remote areas around the world. What is Fair Trade Coffee? Coffee prices paid to the farmer are based on the international commodity price for coffee (the "C" price) and the quality premium each farmer negotiates. Fair Trade provides an internationally determined minimum floor price when the C plus premium sinks below \$1.26 per pound for conventional and \$1.41 for organics (that's us!). As important as price, Fair Trade works with small farmers to create democratic cooperatives that insure fair dealing, accountability and transparency in trade transactions. In an industry where the farmer is traditionally ripped off by a host of middlemen, this is tremendously important. Cooperatives are examined by the Fairtrade Labeling Organization (FLO), or the International Fair Trade Association (IFAT), European NGOs, for democratic process and transparency. Those that pass are listed on the FLO Registry or become IFAT members. Cooperatives provide important resources and organization to small farmers in the form of technical assistance for crop and harvest improvement, efficiencies in processing and shipping, strength in negotiation and an array of needed social services, such as health care and credit. Fair Trade also requires pre-financing of up to sixty percent of the value of the contract, if the farmers ask for it. Several groups, such as Ecologic and Green Development Fund have created funds for pre-finance lending.

AngularJS Brad Green 2013-04-08 Develop smaller, lighter web apps that are simple to create and easy to test, extend, and maintain as they grow. This hands-on guide introduces you to AngularJS, the open source JavaScript framework that uses Model-view-controller (MVC) architecture, data binding, client-side templates, and dependency injection to create a much-needed structure for building web apps. Guided by two engineers who worked on AngularJS at Google, you'll walk through the framework's key features, and then build a working AngularJS app—from layout to testing, compiling, and debugging. If you have JavaScript experience, you'll learn how AngularJS helps reduce the complexity of your web app. Dive deep into Angular's building blocks and learn how they work together Gain maximum flexibility by separating logic, data, and presentation responsibilities with MVC Assemble your full app in the browser, using client-side templates Use AngularJS directives to extend HTML with declarative syntax Communicate with the server and implement simple caching with the \$http service Use dependency injection to improve refactoring, testability, and multiple environment design Get code samples for common problems you face in most web apps

Angels and Demons in Art Rosa Giorgi 2005 This sumptuously illustrated volume analyzes artists' representations of angels and demons and heaven and hell from the Judeo-Christian tradition and describes how these artistic portrayals evolved over time. As with other books in the Guide to Imagery series, the goal of this volume is to help contemporary art enthusiasts decode the symbolic meanings in the great masterworks of Western Art. The first chapter traces the development of images of the Creation and the Afterworld from descriptions of them in the Scriptures through their evolution in later literary and philosophical works. The following two chapters examine artists' depictions of the two paths that humans may take, the path of evil or the path of salvation, and the punishments or rewards found on each. A chapter on the Judgment Day and the end of the world explores portrayals of the mysterious worlds between life and death and in the afterlife. Finally, the author looks at images of angelic and demonic beings themselves and how they came to be portrayed with the physical attributes--wings, halos, horns, and cloven hooves--with which we are now so familiar. Thoroughly researched by and expert in the field of iconography, Angels and Demons in Art will delight readers with an interest in art or religious symbolism.

Spaces of Interaction, Places for Experience David Benyon 2014-10-01 Spaces of Interaction, Places for Experience is a book about Human-Computer Interaction (HCI), interaction design (ID) and user experience (UX) in the age of ubiquitous computing. The book explores interaction and experience through the different spaces that contribute to interaction until it arrives at an understanding of the rich and complex places for experience that will be the focus of the next period for interaction design. The book begins by looking at the multilayered nature of interaction and UX—not just with new technologies, but with technologies that are embedded in the world. People inhabit a medium, or rather many media, which allow them to extend themselves, physically, mentally, and emotionally in many directions. The medium that people inhabit includes physical and semiotic material that combine to create user experiences. People feel more or less present in these media and more or less engaged with the content of the media. From this understanding of people in media, the book explores some philosophical and practical issues about designing interactions. The book journeys through the design of physical space, digital space, information space, conceptual space and social space. It explores concepts of space and place, digital ecologies, information architecture, conceptual blending and technology spaces at work and in the home. It discusses navigation of spaces and how people explore and find their way through environments. Finally the book arrives at the concept of a blended space where the physical and digital are tightly interwoven and people experience the blended space as a whole. The design of blended spaces needs to be driven by an understanding of the correspondences between the physical and the digital, by an understanding of conceptual blending and by the desire to design at a human scale. There is no doubt that HCI and ID are changing. The design of “microinteractions” remains important, but there is a bigger picture to consider. UX is spread across devices, over time and across physical spaces. The commingling of the physical and the digital in blended spaces leads to new social spaces and new conceptual spaces. UX concerns the navigation of these spaces as much as it concerns the design of buttons and screens for apps. By taking a spatial perspective on interaction, the book provides new insights into the evolving nature of interaction design.
