The School of War Alexandre Najjar 2013-11-15 Alexandre Najjar was eight when Lebanon erupted into a bloody and brutal conflict; he was twenty-three when the guns at last fell silent. After seven years of voluntary exile spent trying to escape the nightmare of civil war, he is now back amongst his family and friends, and the past is quickly catching up with him. As he reacquaints himself with his bullet-riddled city, Alexandre is haunted by vivid memories which he sets down with extraordinary candour and good humour. Sometimes nostalgic, often brutal and shocking, The School of War offers unforgettable insight into a child's experiences during times of conflict. 'A marvellously affecting memoir of the war in Lebanon: perfectly pitched and intensely evocative, and all the more powerful from being seen through the eyes of a child.' **Thoughts of Sorts** Georges Perec 2011 Perec was a leading exponent of French literary surrealism who found humour - and pathos - in the human need for classification. Thoughts of Sorts is itself unclassifiable, a unique collection of philosophical riffs on his obsession with lists, puzzles, catalogues, and taxonomies. Introduced by Margaret Drabble.

**Knowledge of Life** Georges Canguilhem 2008 As the work of thinkers such as Michel Foucault, François Jacob, Louis Althusser, and Pierre Bourdieu demonstrates, Georges Canguilhem has exerted tremendous influence on the philosophy of science and French philosophy more generally. In Knowledge of Life, a book that spans twenty years of his essays and lectures, Canguilhem offers a series of epistemological histories that seek to establish and clarify the stakes, ambiguities, and emergence of philosophical and biological concepts that defined the rise of modern biology. How do transformations in biology and modern medicine shape conceptions of life? How do philosophical concepts feed into biological ideas and experimental practices, and how are they themselves transformed? How does knowledge undo the experience of life so as to help man remake

what life has made without him, in him or outside of him? Knowledge of Life is Canguilhem's effort to explain how the movements of knowledge and life come to rest upon each other. Published at the dawn of the genetic revolution and still pertinent today, the book tackles the history of cell theory, the conceptual moves toward and away from mechanical understandings of the organism, the persistence of vitalism, and the nature of normality in science and its objects.

The Cremona Group and Its Subgroups Julie Déserti 2021-04-13 The goal of this book is to present a portrait of the  $n$ -dimensional Cremona group with an emphasis on the 2-dimensional case. After recalling some crucial tools, the book describes a naturally defined infinite dimensional hyperbolic space on which the Cremona group acts. This space plays a fundamental role in the study of Cremona groups, as it allows one to apply tools from geometric group theory to explore properties of the subgroups of the Cremona group as well as the degree growth and dynamical behavior of birational transformations. The book describes natural topologies on the Cremona group, codifies the notion of algebraic subgroups of the Cremona groups and finishes with a chapter on the dynamics of their actions. This book is aimed at graduate students and researchers in algebraic geometry who are interested in birational geometry and its interactions with geometric group theory and dynamical systems.

**Trial by Laughter** Ian Hislop 2018-09-14 Following critical acclaim for *The Wipers Times*, Ian Hislop and Nick Newman have once again taken inspiration from real

life events for their new play *Trial by Laughter*. William Hone, the forgotten hero of free speech, was a bookseller, publisher and satirist. In 1817, he stood trial for 'impious blasphemy and seditious libel'. The only crime he had committed was to be funny. Worse than that he was funny by parodying religious texts. And worst of all, he was funny about the despotic government and the libidinous monarchy. A Watermill Theatre production.

Ferragus, Chief of the Devorants Honoré de Balzac 2021-12-06 In 'Ferragus, Chief of the Devorants' Balzac skillfully traces a dazzling panorama of 19th century Parisian streets and vividly invokes a sparkling menagerie of characters in ultra-fine detail. A young cavalry officer strolls down these very streets when he spots a beautiful lady in the company of an ill-reputed man. The man is veiled in an impenetrable cloak of secrecy, which also raises questions about the woman at his side, transforming the novel into a thrilling criminal escapade. Flooded with murders, prison escapees, family secrets, and tragic endings, 'Ferragus, Chief of the Devorants' is a darkly ironic albeit sublime reflection of the human condition and the ultimate price of deceit. Recommended for readers who are fascinated by the forays into the human soul and conscience deliberated in Dostoyevsky's 'Crime and Punishment' and Gogol's 'Dead Souls'. Also, Guy de Maupassant, Flaubert and Emile Zola were naturalist writers who were directly influenced by Balzac. Honoré de Balzac (1799-1850) was a French novelist and playwright, most famous for his collection of novels and plays, collectively called 'The Human Comedy'. His detailed observation of humanity and realistic depiction of society makes him one of the earliest representatives of realism in Europe. He was a master-creator of complex characters that often found themselves in ambiguous moral dilemmas.

**International Handbook of Research in History, Philosophy and Science Teaching** Michael R. Matthews 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical, curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is, informed by the history and philosophy of these disciplines, as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much-needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national, and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique, encyclopaedic handbook, Gerald Holton, Physics Department, Harvard University This handbook gathers the fruits of over thirty years’ research by a growing international and cosmopolitan

*Color and Light in Nature* David K. Lynch 2001-06-11 We live in a world of optical marvels - from the commonplace but beautiful rainbow, to the rare and eerie superior mirage. But how many of us really understand how a rainbow is formed, why the setting sun is red and flattened, or even why the sky at night is not absolutely black? This beautiful and informative guide provides clear explanations to all naturally occurring optical phenomena seen with the naked eye, including shadows, halos, water optics, mirages and a host of other spectacles. Separating myth from reality, it outlines the basic principles involved, and supports them with many figures and references. A wealth of rare and spectacular photographs, many in full color, illustrate the phenomena throughout. In this new edition of the highly-acclaimed guide to seeing, photographing and understanding nature's optical delights, the authors have added over 50 new images and provided new material on experiments you can try yourself.

**Proof and Proving in Mathematics Education** Gila Hanna 2012-06-14 \*THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK\* One of the most significant tasks facing mathematics educators is to understand the role of mathematical reasoning and proving in mathematics teaching, so that its presence in instruction can be enhanced. This challenge has been given even greater importance by the assignment to proof of a more prominent place in the mathematics curriculum at all levels. Along with this renewed emphasis, there has been an upsurge in research on the teaching and learning of proof at all grade levels, leading to a re-examination of the role of proof in the curriculum and of its relation to other forms of explanation, illustration and justification. This book, resulting from the 19th ICMI Study, brings together a variety of viewpoints on issues such as: The potential role of reasoning and proof in deepening mathematical understanding in the classroom as it does in mathematical practice. The developmental nature of mathematical reasoning and proof in teaching and learning from the earliest grades. The development of suitable curriculum materials and teacher education

programs to support the teaching of proof and proving. The book considers proof and proving as complex but foundational in mathematics. Through the systematic examination of recent research this volume offers new ideas aimed at enhancing the place of proof and proving in our classrooms.

The End of Protest Micah White 2016 "From the co-creator of the Occupy Wall Street movement, a refreshing manifesto that inaugurates the future of social activism and the end of protest as you know it. Intellectually ambitious and spiritually compelling, [this work] will be the most talked-about non-fiction book in 2016.

Activism is broken. In recent years we have witnessed the largest protests in human history. And yet these mass mobilizations no longer change society. Now protest is at a crossroads: innovation or irrelevance. Drawing on his unique experience as a founder of Occupy Wall Street, in his first book, 'The End of Protest,' Micah White explores the theory, tactics and principles of social change."

There are five types of business objects which are: the drivers, the entropy inhibitors, the inhibitors, the catalysts and the gravitational objects.
