Topics include this covers inflammatory diseases, iatrogenic conditions, changes associated with menopause, and benign and malignant neoplasms. This text also address adjunctive testing such as molecular diagnostics and immunohistochemistry staining. The text is concise and practical with a liberal use of bullet points, and it includes clinicopathologic correlations. Toxicologic Pathology for Non-Pathologists

Thomas J. Steinbach 2019-10-31 This extensive volume began as a short course primarily geared toward toxicologists who want to expand their understanding of toxicologic pathology in order to be better study directors while also proving to be of great interest to other drug development scientists and regulatory reviewers. Within the book,

readers will find an overview of general pathology concepts that include fundamental vocabulary and the basics of pathophysiological processes, along with numerous chapters devoted to pathology in specific organ systems as well as topics such as biomarkers, correlation of clinical pathology endpoints (chemistry and

hematology) with microscopic changes, and well-known pathology findings for classes of toxic substances. Authoritative, practical, and comprehensive, Toxicologic Pathology for Non-Pathologists aims to help non-pathologists understand, converse in, and apply a basic understanding of pathology in their day-to-day careers.
